

HDFS Basic File Operations

1. Create Directory in HDFS

Create a new directory named `demo` in HDFS.

```
hdfsdfs -mkdir /demo
```

2. Upload Files to HDFS

Upload all text files matching `sample*.txt` to the `/demo` directory.

```
hdfsdfs -put sample*.txt /demo
```

3. Check Files in HDFS Directory

List the contents of the `/demo` directory and root directory.

```
hdfsdfs -ls /demo  
hdfsdfs -ls /
```

4. Read File Content

Display the contents of `sample1.txt` stored in HDFS.

```
hdfsdfs -cat /demo/sample1.txt
```

5. Download File from HDFS

Download `sample1.txt` from HDFS to the local file system as `downloaded.txt`.

```
hdfsdfs -get /demo/sample1.txt downloaded.txt
```

6. Check Default Replication Factor

Display the replication factor and filename for all files in the `/demo` directory.

```
hdfsdfs -stat "%r %n" /demo/*
```

Summary of Commands

Operation	Command
Create Directory	<code>hdfsdfs -mkdir /demo</code>
Upload Files	<code>hdfsdfs -put sample*.txt /demo</code>
List Files	<code>hdfsdfs -ls /demo</code>
Read File	<code>hdfsdfs -cat /demo/sample1.txt</code>
Download File	<code>hdfsdfs -get /demo/sample1.txt downloaded.txt</code>
Check Replication Factor	<code>hdfsdfs -stat "%r %n" /demo/*</code>
